

OUTREACH AMBASSADOR PROGRAM

COMMUNICATING THE COSMOS

FOUNDER'S VISION

"Science changes the world, but its greatest impact comes when it inspires people. Through the Outreach Ambassador Program, we're empowering researchers to share their passion and discoveries with confidence, creating meaningful connections that spark curiosity, broaden horizons, and inspire the next generation to dream bigger and explore the unknown."

Diana Haikal
Ambassador Program Co-Developer
Senior Communications and Engagement Lead

OBJECTIVES

TRAIN

Ambassadors receive training in science communication, public speaking, school engagement, media, storytelling and more

ENGAGE

Ambassadors participate in a variety of activities: school visits, public events, teacher workshops, science festivals, virtual experiences and etc. creating real impact in classrooms and communities across Australia and beyond

INSPIRE & IMPACT

PUBLIC EVENTS

FOUNDER'S VISION

"Outreach programs are typically designed to benefit public audiences — but they can also be powerful training grounds for researchers themselves. By embedding researcher development within authentic outreach experiences, we have found that these programs strengthen both the quality of public engagement and the confidence and capability of the researchers involved."

Jackie Bondell
Ambassador Program Co-Developer
Senior Education and Outreach Manager

AMBASSADOR VOICES

"One of the most rewarding feelings as a scientist is inspiring the next generation, watching their eyes fill with awe and wonder as the universe is unveiled before them never ceases to bring me joy."

Joshua Baines
Postdoctoral Researcher
The University of Melbourne

"Outreach keeps me connected to why I love physics: it brings me real joy, and there's nothing better than showing young people that a career in physics is possible for everyone."

Rowina Nathan
Postdoctoral Researcher
Australian National University

"I am where I am today because of educators and science communicators who sparked my curiosity. Playing a small part in creating that same spark for someone else is incredibly rewarding."

Christine Lee
Postdoctoral Researcher
The University of Melbourne

"Being an outreach ambassador is incredibly meaningful to me because I believe science is at its most valuable when it is shared, communicated, and made accessible to others."

Neil Lu
PhD Candidate
Australian National University

"Being part of the Ambassador Program is a huge opportunity, not only to reach and inspire a new generation of scientists but also to learn how to explain and communicate your science effectively."

Olivia Vidal Velázquez
PhD Candidate
Swinburne University
